

COVID-19 VACCINE MYTHS vs TRUTHS

VACCINES PROMOTE AN IMMUNE RESPONSE

WHICH HELP FIGHT OFF THE VIRUS!

MYTH:
Designed for profit by governments

TRUTH:
Governments are committed to saving lives. They are aware that vaccines are the best way to prevent the spread of the virus and have engaged with corporations to ensure that the population receives the treatment.

TRUTH:
Vaccines work by supplying antigens necessary for the body to produce antibodies which combat the actual virus. The vaccines do not interact with nor alter DNA within the body.

MYTH:
Alters my DNA

MYTH:
Developed too fast

TRUTH:
Coronavirus vaccines were developed based on decades long research into other illnesses. The vaccines appear to be safe and effective. While they were developed quickly under emergency circumstances, they have & continue to undergo rigorous tests meeting safety requirements.

MYTH:
Severe side-effects

TRUTH:
The early evidence suggests that only mild and short-lived symptoms of the vaccines exist. These include muscle pain and fatigue. The virus mortality rate (1-2%) is 10 times that of the flu suggesting that vaccination is necessary.

MYTH:
Spread via 5G

TRUTH:
The virus is spread through direct contact with respiratory droplets. It is not possible for viruses to travel across radio waves and mobile networks.

MYTH:
Contains microchip for tracking

TRUTH:
Receiving a vaccine will not allow the government to track you. The vaccine contains no microchip and no personal information will be entered into a database.

TRUTH:
There is not enough evidence to suggest that natural immunity lasts very long and it is recommended that everyone gets vaccinated. In addition, precautions should still be taken till everyone is vaccinated.

MYTH:
Vaccination not necessary for those who've recovered from Covid-19
